## Compass to Protractor - Worksheet

1) Imagine that you are standing at the origin of your graph. Below are bearings taken from the origin to specific landmarks.
2) Move in the direction of the bearing (for example, 0 degrees would mean move north). Now look back at the origin. What is the bearing from your new location to the origin?
3) Complete the chart below.

Bearing (in degrees) from:

| You to Landmark | Landmark to You | You to Landmark | Landmark to You |
| :--- | :--- | :--- | :--- |
| 0 (or 360) |  | 150 |  |
| 10 |  | 200 |  |
| 50 |  | 270 |  |
| 90 |  | 290 |  |
| 100 |  | 300 |  |

4) Can you discover a formula (or an easy way) to convert from one bearing to another?
