

Water Use Tracking Log

We will use this data to perform an analysis to determine how much water would need to be delivered if we had to go without water in the event of a natural disaster.

Keep a diary of water use in your home for three days. On this data table, record how often various water-use activities occur. Ask each household member to cooperate and help you.

DATA TABLE - Person 1			
Per household	Day 1	Day 2	Day 3
Number of persons			
Number of baths			
Number of showers Average duration of a shower (in minutes)			
Number of toilet flushes
