## Activity Pre/Post-Quiz

1. The variable $y$ is in a proportional relationship with $x$. The number of squares represents an $x$ value, the number of ovals represents the corresponding $y$ value. Identify the constant of proportionality.

The constant of proportionality is $\qquad$ .
2. If a solution is acidic, it can be neutralized by adding a (an) $\qquad$ -.
3. A mystery substance has an unknown pH . How is pH paper used to determine the pH of the substance?
$\square$
4. A recipe for a dozen cookies calls for 385 g ( 13 oz .) of sugar and 355 mL ( 12 oz .) of milk. Let x be the milk used, $y$ the sugar used. Express this relationship with an equation. If you use 890 mL ( 30 oz.) of milk, how much sugar should you use?
5. When working with pH , what are indicators?
$\square$
6. A group of students are working on a solution to a proposed problem. After they have researched and constructed a prototype, they begin testing. Their prototype failed and they are at a loss as to what to do next. Explain what step they should take next.
