

Name: _____ Date: _____ Class: _____

Research Record Page

My animal is: _____

Its habitat: _____

Its injury or problem: _____

To help your animal, you must do some research about your animal. This means using books and the computer to look up information.

Sketch of my animal:

What I learned about my animal's features, including its injury or problem:

What adaptation could I design for my animal that would fix its injury or solve its problem?

To create a habitat for your animal to live in while it heals, you must research your animal's habitat in the wild.

Sketch of my animal's habitat:

What plants live in my animal's habitat? Find at least three.

What other animals live in my animal's habitat? Find at least two.

What does my animal eat?

What other animals eat my animal?

Where does my animal find shelter?

Now you are ready to create your animal and its habitat! Use the clay to make your animal, and create its habitat inside the shoebox.

Use the information you researched in your diorama. Include:

- Your animal
- Any landforms or water features in the habitat
- At least 3 plants
- At least 2 other animals
- A shelter for your animal

Engineers sketch their ideas before they create them. Use the space below to plan out your diorama.
