Section 3: Independent Practice Worksheet

Instructions:

We know from the Nmap network reconnaissance guided practice that the Kali username and password consists of eight alpha characters and the letters a, d, f, i, m, n s. However, pretend we are not sure of the order of those characters except for the first four characters (msfa. . .). Use Crunch to generate both your user and password wordlists in the /root/wordlists folder. The more accurate your wordlist, the better the time savings.
