# Section 3: Independent Practice Worksheet

**Instructions:** We know from the Netcat network reconnaissance guided practice that the Kali username and password consists of eight alpha characters and the letters a, d, f, i, m, n s. However, pretend we are not sure of the order of those characters except for the first four characters (msfa....) Use Maskprocessor to generate both your user and password wordlists in the */root/wordlists* folder. The more accurate your wordlist, the better the time savings.
