# Final Assessment: My School's COVID-19 Procedures

Now that you've researched procedures other schools are using and what your own school is doing, it's time to assess your school's performance when it comes to preventing COVID-19.

## Part I: Short Answers

**Answer each of these questions in complete sentences**

1. What is the most effective measure your school is taking to prevent COVID-19? How do you know it is effective?
2. What is the least effective measure your school is taking to prevent COVID-19? Should it be altered or replaced with a different measure? Explain.
3. Describe one preventive measure used by another school that you think would work well in your school. Explain why you think it would be effective.

## Part II: Essay Question

**Write about 1 page giving an in-depth look at what you discovered when you observed one of your school's procedures. The audience for your essay is your school's principal. Your essay should answer the following questions:**

- What procedure will you be addressing? When was it observed in action?
- Was the procedure working as intended? If not, what was wrong?
- What could the school do to help the procedure run more smoothly/effectively? Address how people, processes, and technology factor into this solution.
- Overall, what grade would you give your school on its COVID prevention strategy?
- What could your school do to earn a higher grade OR why did you rank it so highly?
